

AMENDMENTS TO THE SPECIFICATION:

ABSTRACT

An extractor hood including at least two separate receiving areas for receiving at least one section of an input module in a selective and removable manner. Further an input module for an electronically controlled domestic appliance, such as an extractor hood, including at least one switching element. The input module forms a separate unit of the domestic appliance and includes at least one contact device for bringing the input module into contact with at least one of several interfaces provided in the domestic appliance to transmit signals between the input module and the domestic appliance.
